Paper Reference **WBI06/01**

Biology

Advanced

Unit 6: Practical Biology and Investigative Skills

You must have:

Calculator, HB pencil, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 50.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- You will be assessed on your ability to organise and present information, ideas, descriptions and arguments clearly and logically, including your use of grammar, punctuation and spelling.
- Candidates may use a calculator.

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

1/1/1

Pearson

Answer ALL questions.

- 1 Zinc is an essential mineral for the growth of plants.

The photograph below shows a young maize plant, *Zea mays*, growing in soil with a deficiency of zinc.

Magnification $\times 1$

The maize plants growing in this soil develop yellow stripes along each leaf and the stems are short.

The stems are short because there is a reduced distance between each leaf.

2 The photograph below shows a giant African land snail, *Achatina fulica*.

Magnification $\times 1$

A student investigated the response of this snail to touch.

When the head of the snail was touched between the eye stalks, the snail responded by withdrawing into its shell.

The student recorded the time for the snail to re-emerge from its shell and extend its eye stalks.

The snail was touched 11 times. The time for the snail to re-emerge was recorded after each touch.

The investigation was repeated with two more snails.

Some of the results of this investigation are shown below.

Snail A

First touch 74 seconds

Third touch 55 seconds

Fifth touch 34 seconds

Seventh touch 38 seconds

Ninth touch 10 seconds

Eleventh touch 5 seconds

Snail B

First touch 74 seconds

Third touch 55 seconds

Fifth touch 34 seconds

Seventh touch 38 seconds

Ninth touch 10 seconds

Eleventh touch 4 seconds

Snail C

First touch 62 seconds

Third touch 47 seconds

Fifth touch 30 seconds

Seventh touch 30 seconds

Ninth touch 16 seconds

Eleventh touch 10 seconds

(c) On the graph paper below, draw a bar graph to show the mean time for re-emergence for each touch.

Include an indication of the variability of the data.

(3)

- 3 When scientists genetically modify a plant to contain a useful gene, they usually produce clones of the plant for further testing and evaluation.

Plant tissue culture can be used to grow a large number of clones from small pieces of plant tissue.

Plant growth regulators, such as auxin (IAA), are used to control the growth of plant tissue.

A student formed the following hypothesis.

The greater the concentration of plant growth regulator, the faster the rate of growth of the plant tissue.

Plan an investigation that you could carry out to support or reject this hypothesis.

Your answer should give details under the following headings.

- (a) A consideration of whether there are any safety issues you would need to take into account.

(2)

.....

.....

.....

.....

.....

.....

(b) Suggestions for preliminary practical work that you might undertake to ensure your proposed method would provide meaningful data

(3)

✓
 Suitable range of independent variable
 ✓
 Suitable method to depend variable
 ✓
 Suitable control variable
