

Mark Scheme (Results)

November 2025

Pearson Edexcel International GCSE in Chemistry
4CH1/1C

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Question number	Answer	Notes	Marks
1 (a)	<p>M1 X melting</p> <p>M2 Y boiling</p> <p>M3 Z sublimation</p>	<p>ALLOW evaporation</p> <p>ALLOW vaporisation</p>	3
(b)	<p>$\text{H}_2\text{O (g)} \rightarrow \text{H}_2\text{O (l)}$</p> <p>M1 both formulae correct</p> <p>M2 both state symbols correct</p>	<p>IGNORE 'water' instead of formulae</p> <p>IGNORE letter case</p> <p>M2 dep on M1</p>	2
(c)	<p>M1 solid (particles) have a regular arrangement OR gas particles are randomly arranged</p> <p>M2 solid (particles) are closely/tightly packed OR gas particles widely spaced</p>	<p>IGNORE statements related to liquids</p> <p>IGNORE diagrams</p> <p>IGNORE statements related to movement including 'random movement'</p>	2
			Total 7

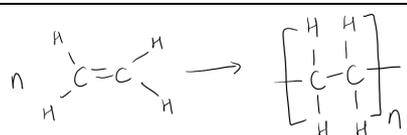

Question number	Answer	Notes	Marks
2 (a) (i)	nitrogen	ALLOW N ₂ IGNORE N	1
(ii)	argon	ALLOW Ar	1
(iii)	oxygen	ALLOW O ₂ IGNORE O	1
(b)	M1 heat (the copper(II) carbonate) M2 until it decomposes (into carbon dioxide) OR M1 add an acid M2 forming salt, water and carbon dioxide	ALLOW thermal decomposition for 2 marks ALLOW correct equation for M2 only ACCEPT acid/carbonate equation for 2 marks	2
(c) (i)	M1 (height of oxygen =) 93 – 77 OR 16 (mm) M2 $\frac{16 \times 100}{93} = 17$ (%)	M2 subsumes M1 ACCEPT 17/17.2/17.20 or any number of sig figs except 1 83/82.8 scores M2 - ecf	2
(ii)	Leave the experiment for longer (than a week)/leave until the water is at a constant height	ALLOW use a measuring cylinder/graduated tube ALLOW use iron fillings ALLOW more iron wool ALLOW warmer temperature repeat/average does not score - apply list principle	1
			Total 8

Question number	Answer	Notes	Marks
3	(a) (i) B (X) <i>A is incorrect as W is a neutron C is incorrect as Y is an electron D is incorrect as Z is the nucleus</i>		1
	(ii) A (W) <i>B is X incorrect as X is a proton which has a +1 charge C is incorrect as Y is an electron which has a -1 charge D is incorrect as Z is the nucleus which contains protons so has an overall positive charge</i>		1
	(iii) Nucleus		1
	(iv) B (3) <i>A is incorrect as it is not 2 C is incorrect as it is not 5 D is incorrect as it is not 11</i>		1
	(v) A (2) <i>B is incorrect as it is not 3 C is incorrect as it is not 5 D is incorrect as it is not 11</i>		1
	(vi) B		1
	(b) (positive) ion/cation	ALLOW 'an ion' REJECT 'anion' REJECT negative	1
	(c) (i) scale on y-axis starting at 6.0 and going up in twos for each large square		1
	(ii) all points plotted to the nearest grid line	ECF for correct points on an appropriate alternative axis	2
	(iii) there is a positive correlation (between the relative atomic mass and the atomic number) / as the atomic number increases so does the relative atomic mass	REJECT directly proportional REJECT proportional REJECT linear	1
Total 11			

Question number	Answer	Notes	Marks
4 (a)	<p>M1 a correct diagram which has an inner shell configuration of 2,8</p> <p>M2 a correct diagram which has an outer shell configuration of 8</p>	<p>'2,8,8' with no diagram scores 1 mark only</p> <p>IGNORE charge on the ion</p>	2
(b)	<p>Test for chloride ions</p> <p>M1 add (nitric) acid (to the ammonium chloride)</p> <p>M2 add silver nitrate solution</p> <p>M3 white precipitate forms</p> <p>Test for sulfate ions</p> <p>M4 add (nitric acid/hydrochloric) acid (to the ammonium sulfate)</p> <p>M5 add barium chloride</p> <p>M6 white precipitate forms</p>	<p>IGNORE tests for ammonium ions</p> <p>REJECT add HCl - loses M1 and M3</p> <p>M3 dep on addition of silver nitrate</p> <p>REJECT add H₂SO₄ - loses M4 and M6</p> <p>ALLOW barium nitrate</p> <p>M6 dep on addition of barium chloride/nitrate</p>	6
(c) (i)	<p>M1 the ammonium chloride should be closer to the hydrochloric acid/further from the ammonia solution/further to the right</p> <p>M2 as hydrogen chloride has a higher M_r/relative molecular mass/relative formula mass ORA</p> <p>M3 so hydrogen chloride (molecules) moves more slowly/diffuses more slowly/travel a shorter distance ORA</p>	<p>ACCEPT (reactant) labels should be the other way around for M1</p> <p>REJECT ammonium chloride should be in the centre for M1</p>	3
(ii)	<p>NH₃ (g) + HCl (g) ⇌ NH₄Cl (s)</p>	<p>IGNORE letter case</p>	1
			Total 12

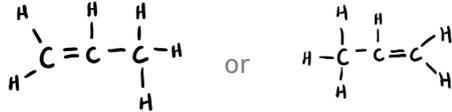

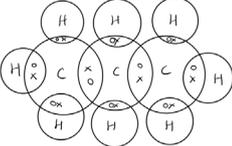

Question number	Answer	Notes	Marks
5 (a)	Copper(II) carbonate is insoluble/doesn't dissolve (in water)		1
(b)	M1 polystyrene cup is an insulator M2 so less heat is lost	ALLOW ORA REJECT prevents heat loss/no heat loss for M2	2
(c)	Allow any two from: M1 concentration of copper(II) sulfate M2 volume of copper(II) sulfate M3 rate of stirring M4 surface area of metal (W) M5 Same initial temperature M6 Same (polystyrene) cup	IGNORE same mass/amount of metal W If no reference to concentration and volume allow amount of copper(II) sulfate for 1 mark	2
(d) (i)	M1 $\frac{6.1 + 6.3 + 6.0}{3}$ OR 6.13 M2 6.1	6.1 in table or in the space available scores 2. Answer line takes priority over the table. ECF for correct calculation to 2sf for any data taken for metal Y	2
(ii)	M1 any one from: Overall temp change should be similar/same as Exp 1/3 OWTTE Temperature increase should not be lower than Exp1/3 Temperature increase would be higher than 2.0 given in the table M2 (as stirring too quickly) would increase the rate of reaction/wouldn't have reduced the amount of heat produced (in the reaction)	REJECT answers which indicate that stirring would have caused the error (i.e. Yes). This scores 0 for the question.	2
(iii)	M1 Z>Y>W>X M2 because the higher the temperature (increase) the more reactive the metal OR more heat released the more reactive the metal		2

5 (d) (iv)	<p>M1 silver is less reactive than copper</p> <p>M2 therefore there was no reaction/there was no (mean) temperature increase/no displacement reaction</p>	<p>M2 dep on correct M1 or M1 missing</p>	<p>2</p> <hr/> <p>Total 13</p>
------------	---	--	---------------------------------------

Question number	Answer	Notes	Marks	
6	(a) (i)	fractional distillation	ACCEPT fractionation ACCEPT fractionating	1
	(ii)	M1 a tower drawn with one entrance and more than one exit M2 crude oil heated/vapourised before entering the tower OR passing through a furnace M3 crude oil enters at bottom M4 kerosene leaves tower but not right at top/bottom One from: M5 a temperature gradient up the column/hottest label at the bottom/coldest label at the top M6 3 or more other fractions labelled in correct place relative to kerosene	'bottom' meaning not higher than the exit of the second lowest fraction REJECT both M5/M6 if either is incorrect	5
	(b) (i)	M1 600 to 700 °C inclusive M2 silica/alumina (catalyst)	ACCEPT zeolites/SiO ₂ /Al ₂ O ₃ aluminosilicates /silicon dioxide /aluminium oxide	2
	(ii)	$C_{14}H_{30} \rightarrow C_8H_{18} + 3C_2H_4$	ALLOW multiples or fractions	1
	(c)	An explanation that links the following three points M1 (octane) can be used as petrol/(fuel) for cars M2 (as it) undergoes combustion/reacts with oxygen/burns M3 releasing heat (energy)	ALLOW other acceptable uses for petrol ACCEPT thermal energy	3
	(d) (i)	 M1 correct repeat unit with extension bonds M2 full equation including ethene, n and brackets	M2 dep on M1	2
(ii)	monomer		1	
			Total 15	

Question number	Answer	Notes	Marks	
7	(a) (i)	any value between 21.4 and 21.8 inclusive	1	
	(ii)	any value between 16.1 and 16.3 inclusive	1	
	(b) (i)	M1 should not be nitric acid added/sodium hydroxide should be added (not nitric acid) M2 the point where the lines cross shows where the acid was neutralised/the acid was neutralised before 40 cm ³ / the acid was neutralised at 21.6 cm ³	ALLOW any value between 21.4-21.8 cm ³ for 21.6 cm ³	2
	(ii)	Any one statement that is: A suitable description e.g. The temperature decreases after the neutralisation point/after 21.6cm ³ (or any value between 21.4-21.8) OR A suitable explanation e.g. The second line shows that there is no further reaction and the cool sodium hydroxide solution decreases the temperature OWTTE		1
	(c) (i)	M1 mass of solution = 25 + 25 OR 50 (g) M2 $Q = mc\Delta T$ OR $3780 = 50 \times 4.2 \times \Delta T$ M3 $\Delta T = \frac{3780}{50 \times 4.2}$ OR 18 (°C) M4 (maximum temperature = 19 + 18 =) 37 (°C)	ALLOW ecf for M2 onwards answer of 36 scores 2 answer of 55 scores 3 correct answer without working scores 4	4
	(ii)	M1 $\frac{3780}{0.079}$ OR 47 848 (J/mol) M2 47.8 (kJ/mol) M3 – 47.8 (kJ/mol) OR M1 $\frac{3780}{1000}$ OR 3.78 (kJ) M2 $\frac{3.78}{0.079}$ OR 47.8 (kJ/mol) M3 – 47.8 (kJ/mol)	correct answer without working scores 3 or 2 without or incorrect sign Incorrect rounding loses M2	3
	Total 12

8 (a)	<table border="1" data-bbox="323 286 954 416"> <thead> <tr> <th data-bbox="323 286 480 315">Ions</th> <th data-bbox="480 286 638 315">Li⁺</th> <th data-bbox="638 286 796 315">Mg²⁺</th> <th data-bbox="796 286 954 315">Al³⁺</th> </tr> </thead> <tbody> <tr> <td data-bbox="323 315 480 344">NO₃⁻</td> <td data-bbox="480 315 638 344"></td> <td data-bbox="638 315 796 344">Mg(NO₃)₂</td> <td data-bbox="796 315 954 344"></td> </tr> <tr> <td data-bbox="323 344 480 374">SO₄²⁻</td> <td data-bbox="480 344 638 374">Li₂SO₄</td> <td data-bbox="638 344 796 374"></td> <td data-bbox="796 344 954 374"></td> </tr> <tr> <td data-bbox="323 374 480 403">PO₄³⁻</td> <td data-bbox="480 374 638 403"></td> <td data-bbox="638 374 796 403"></td> <td data-bbox="796 374 954 403">AlPO₄</td> </tr> </tbody> </table>	Ions	Li ⁺	Mg ²⁺	Al ³⁺	NO ₃ ⁻		Mg(NO ₃) ₂		SO ₄ ²⁻	Li ₂ SO ₄			PO ₄ ³⁻			AlPO ₄		3
Ions	Li ⁺	Mg ²⁺	Al ³⁺																
NO ₃ ⁻		Mg(NO ₃) ₂																	
SO ₄ ²⁻	Li ₂ SO ₄																		
PO ₄ ³⁻			AlPO ₄																
(b)	<p>M1 (sodium chloride and magnesium oxide) have a giant ionic structure /lattice</p> <p>M2 (there are) electrostatic forces / attraction between oppositely charged ions /negative and positive ions / anions and cations</p> <p>M3 MgO has stronger attraction (between ions) than NaCl ORA</p> <p>M4 (because the) ions in MgO have a higher charge/higher charge density (than NaCl) ORA</p> <p>M5 which take more energy (to overcome the forces / break the bonds) ORA</p>	<p>Mention of covalent bonding, intermolecular forces, metallic bonding, molecules loses M1-M4.</p> <p>ALLOW ionic bonds</p> <p>‘stronger ionic bonds in MgO’ scores M2 and M3</p> <p>ACCEPT correct charges on ions</p>	5																
			Total 8																

Question number	Answer	Notes	Marks
9 (a)	<p>Displayed formula of propene</p>  <p>Molecular formula of propene C_3H_6</p> <p>Empirical formula of propene CH_2</p> <p>Relative formula mass of propene 42</p> <p>(b) M1 correct electron sharing between 3 carbon atoms</p> <p>M2 rest of structure correctly drawn</p> 	<p>Must show ALL the bonds</p> <p>IGNORE calculation</p> <p>ACCEPT any combination of dots and crosses</p> <p>M2 dep on M1</p>	3
(c) (i)	<p>B (1, 2)</p> <p>A as (1,1) is incorrect C as (2,1) is incorrect D as (2,2) is incorrect</p> <p>(ii) ultra violet radiation / ultra violet light/UV</p> <p>(iii) M1 $\frac{25.9}{12}$ $\frac{5.0}{1}$ $\frac{11.5}{16}$ $\frac{57.6}{80}$</p> <p>M2 $\frac{2.16}{0.72}$ $\frac{5.0}{0.72}$ $\frac{0.72}{0.72}$ $\frac{0.72}{0.72}$</p> <p>OR 3 6.94 1 1</p> <p>M3 C_3H_7OBr</p> <p>(d) (i) atom/groups of atoms (in a compound)/part of a molecule that determines its chemical properties/reactions OWTTE</p> <p>(ii) structure of cyclopropane</p>	<p>IGNORE sunlight</p> <p>0 marks for upside down calculation or use of any atomic number (6/8/35)</p> <p>ecf allowed from M2 if one incorrect Ar value used that is not an atomic number for these element (6/8/35)</p> <p>correct answer without working scores 3</p>	1
			Total 12

Question number	Answer	Notes	Marks
10 (a)	A (3) B is incorrect as there are not 5 elements C is incorrect as there are not 14 elements D is incorrect as there are 17 atoms not 17 elements		1
(b) (i)	M1 (excess) aluminium (powder) M2 aluminium sulfate AND water	ACCEPT (leftover) water IGNORE aluminium sulfate solution unless water is also stated ALLOW correct symbols	2
(ii)	Ensure all the (sulfuric) <u>acid</u> reacts	ALLOW neutralises (all) the <u>acid</u> IGNORE maximum yield	1
(iii)	M1 greater surface area (to volume ratio) M2 increases the rate of reaction/speeds up the reaction/more frequent (successful) collisions/more (successful) collisions per unit time	REJECT kinetic energy for M1 IGNORE dissolving faster	2
(c) (i)	M1 amount of Al = $3.20 \div 27$ OR 0.119 (mol) M2 $\frac{0.120 \times 2}{3} = 0.08$ (mol) of Al (so 0.1 is in excess) OR M2 $\frac{0.119 \times 3}{2} = 0.179$ (mol) of H ₂ SO ₄ (only 0.12 used)	alternative answer M1 only 0.08 (mol) of Al needed M2 mass of Al = $0.08 \times 27 = 2.16\text{g}$ (less than 3.20 g)	2

(ii)	<p>M1 amount of $\text{Al}_2(\text{SO}_4)_3 = 0.120 \div 3$ OR 0.04(00) (mol)</p> <p>M2 theoretical mass = $(0.04(00) \times 342 =)$ 13.68 g</p> <p>M3 recorded actual mass = $(13.68 \times 1.13) = 15.46$ g</p>	<p>correct answer without working scores 3</p> <p>ALLOW ecf for incorrect M_r</p> <p>ALLOW any number of sig figs except 1</p> <p>46.38 scores 2 marks</p>	3
(iii)	<p>Any one from:</p> <p>M1 (the crystals/product) haven't fully dried/still contain water/not all water evaporated</p> <p>M2 sulfuric acid used was more concentrated</p> <p>M3 higher volume of sulfuric acid used than stated</p>	<p>ALLOW reference to hydrated salt</p> <p>IGNORE calculation error</p> <p>REJECT add more aluminium</p>	1
			Total 12
