Pearson Edexcel International Advanced Level

Tuesday 24 October 2023

Morning (Time: 1 hour 45 minutes) | **Paper reference** **WCH15/01**

Chemistry
International Advanced Level
UNIT 5: Transition Metals and Organic Nitrogen Chemistry

You must have:
Scientific calculator, Data Booklet, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
  – *there may be more space than you need*.

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets
  – *use this as a guide as to how much time to spend on each question*.
- In the question marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- A Periodic Table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Show all your working in calculations and include units where appropriate.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ▶

Pearson

Answer ALL the questions in this section.

You should aim to spend no more than 20 minutes on this section.

For each question, select one answer from A to D and put a cross in the box ⊠. If you change your mind, put a line through the box ⊠ and then mark your new answer with a cross ⊠.

1   Which of these is a d-block element but is not a transition element?

   ⊠   **A**   cobalt

   ⊠   **B**   copper

   ⊠   **C**   nickel

   ⊠   **D**   zinc

(Total for Question 1 = 1 mark)

2   In which of these pairs does the transition metal have the same oxidation number?

   ⊠   **A** CrO_2Cl_2 and $[Cr(NH_3)_4Cl_2]^+$

   ⊠   **B** $[Cu(NH_3)_2]^+$ and $[CuCl_4]^{2-}$

   ⊠   **C** Mn_2O_3 and MnO_2

   ⊠   **D** VO_3^- and VO_2^+

(Total for Question 2 = 1 mark)

3   What is the co-ordination number of chromium in the complex ion shown?
   ⊠   **A**   2

   ⊠   **B**   3

   ⊠   **C**   4

   ⊠   **D**   6

(Total for Question 3 = 1 mark)

4 Aqueous sodium hydroxide and aqueous ammonia are added, until they are in excess, to separate portions of a pale green aqueous solution **E**.

Test	Observations
Aqueous sodium hydroxide is added to **E**	Green precipitate forms No further change in excess
Aqueous ammonia is added to **E**	Green precipitate forms Green precipitate dissolves in excess to form a pale blue solution

Which ion is present in **E**?

☒ **A** Cu^{2+}

☒ **B** Fe^{2+}

☒ **C** Ni^{2+}

☒ **D** V^{2+}

(Total for Question 4 = 1 mark)

5 A **small** amount of aqueous ammonia is added to an aqueous solution containing zinc ions. A white precipitate forms.

Which is the equation for this reaction?

☒ **A** $[Zn(H_2O)_6]^{2+} + 2NH_3 \rightarrow [Zn(OH)_2(H_2O)_4]^{2+} + 2NH_4^+$

☒ **B** $[Zn(H_2O)_6]^{2+} + 2NH_3 \rightarrow Zn(OH)_2(H_2O)_4 + 2NH_4^+$

☒ **C** $[Zn(H_2O)_6]^{2+} + 4NH_3 \rightarrow [Zn(NH_3)_4(H_2O)_2]^{2+} + 4H_2O$

☒ **D** $[Zn(H_2O)_6]^{2+} + 4NH_3 \rightarrow Zn(NH_3)_4(H_2O)_2 + 2H_2O + 2H_3O^+$

(Total for Question 5 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

6 Acidified manganate(VII) ions react with ethanedioate ions.

$$2MnO_4^- + 16H^+ + 5C_2O_4^{2-} \rightarrow 2Mn^{2+} + 8H_2O + 10CO_2$$
The rate of this reaction increases then decreases.

What are the reasons for these changes in rate of reaction?

	Reason rate increases	Reason rate decreases
☒ **A**	Mn^{2+} acts as a catalyst	kinetic energy of particles decreases
☒ **B**	Mn^{2+} acts as a catalyst	concentration of reactants decreases
☒ **C**	MnO_4^- acts as a catalyst	kinetic energy of particles decreases
☒ **D**	MnO_4^- acts as a catalyst	concentration of reactants decreases

(Total for Question 6 = 1 mark)

7 $E_{cell}^{\ominus}$ is directly proportional to

☒ **A** $\Delta_r H$ and $\ln K$

☒ **B** $\Delta_r H$ and $\ln RT$

☒ **C** ΔS_{total} and $\ln K$

☒ **D** ΔS_{total} and $\ln RT$

(Total for Question 7 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

8 Standard electrode potentials can also be given an alternative name.
The electrochemical series lists standard electrode potentials in order.

Which of these is correct?

		Alternative name for standard electrode potential	Order of standard electrode potentials in the electrochemical series
☒	**A**	standard reduction potential	most negative to most positive
☒	**B**	standard reduction potential	most positive to most negative
☒	**C**	standard cell potential	most negative to most positive
☒	**D**	standard cell potential	most positive to most negative

(Total for Question 8 = 1 mark)

9 The half-equation for the reaction taking place at the positive electrode in an **alkaline** hydrogen-oxygen fuel cell is

$$O_2 + 2H_2O + 4e^- \rightarrow 4OH^-$$
What is the half-equation for the reaction taking place at the negative electrode?

☒ **A** $H_2 + 2OH^- \rightarrow 2H_2O + 2e^-$

☒ **B** $H_2 + OH^- \rightarrow H_2O + H^+ + 2e^-$

☒ **C** $H_2 \rightarrow 2H^+ + 2e^-$

☒ **D** $H_2 + H_2O \rightarrow 3H^+ + OH^- + 2e^-$

(Total for Question 9 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

P 7 2 9 9 5 A 0 5 3 2

10 The emf, $E^{\ominus}_{cell}$, of a cell is +0.57V.

The numerical values of the standard electrode potentials of the two half-cells joined in this cell are 0.17V and 0.40V.

What are the signs of the standard electrode potentials of the right-hand half-cell and the left-hand half-cell?

	Sign of standard electrode potential	
	in left-hand half-cell	in right-hand half-cell
☒ **A**	negative	negative
☒ **B**	negative	positive
☒ **C**	positive	negative
☒ **D**	positive	positive

(Total for Question 10 = 1 mark)

11 An electrochemical cell is set up:

* a half-cell is made from a piece of zinc and a solution of zinc chloride, $ZnCl_2$

* a second half-cell is made from a piece of metal **G** and a solution of its chloride, **G**Cl_2

* the two half-cells are connected and a current allowed to pass for some time.

The zinc electrode increased in mass by 1.635 g.

The electrode of metal **G** decreased in mass by 0.6075 g.

What is metal **G**?

☒ **A** copper

☒ **B** iron

☒ **C** magnesium

☒ **D** manganese

(Total for Question 11 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

**12** Which of these is the **weakest** base?

☒ **A** ammonia

☒ **B** butylamine

☒ **C** ethylamine

☒ **D** phenylamine

(Total for Question 12 = 1 mark)

13 The amino acid 2-aminopropanoic acid exists as a zwitterion at pH 6.0

What will be the structure of 2-aminopropanoic acid at pH 9.0?

☒ **A** $H_2NCH(CH_3)COOH$

☒ **B** $H_2NCH(CH_3)COO^-$

☒ **C** $H_3N^+CH(CH_3)COOH$

☒ **D** $H_3N^+CH(CH_3)COO^-$

(Total for Question 13 = 1 mark)

14 An organic compound, **J**, reacts with

• sodium hydroxide to form an ionic compound

• hydrogen in the presence of a nickel catalyst

• ethanol in the presence of sulfuric acid.

Which of these could be the structure of **J**?

☒ **A** $CH_2=CHCOOH$

☒ **B** C_6H_5OH

☒ **C** $CH_2=CHCH_2OH$

☒ **D** CH_3COOH

(Total for Question 14 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

15 A reaction scheme for the preparation of an azo dye is shown.

azo dye
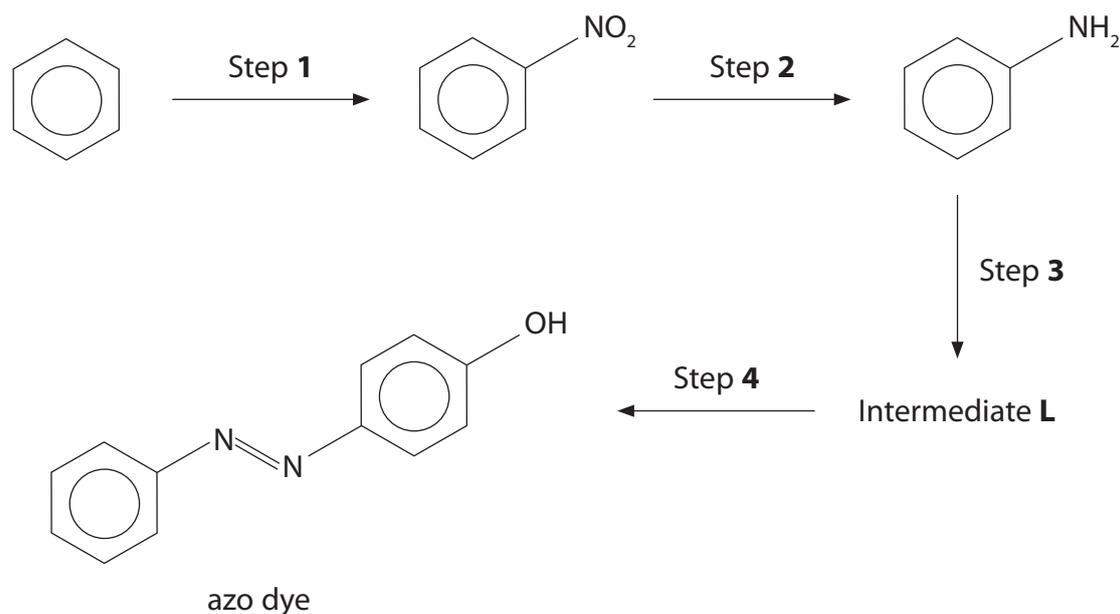

(a) Step **1** takes place using a mixture of concentrated nitric acid and concentrated sulfuric acid at 55°C.

Why is the reaction **not** carried out at 80°C?

(1)

☒ **A** further substitution by a nitro group occurs

☒ **B** nitrobenzene decomposes

☒ **C** substitution by SO_3H occurs

☒ **D** the nitric acid decomposes

(b) How is Step **2** carried out?

(1)

☒ **A** Sn, concentrated HCl(aq) and NaOH(aq) are added together

☒ **B** Sn, dilute HCl(aq) and NaOH(aq) are added together

☒ **C** Sn and concentrated HCl(aq) are added first, then NaOH(aq) is added at the end

☒ **D** Sn and dilute HCl(aq) are added first, then NaOH(aq) is added at the end

(c) Step **3** takes place using sodium nitrite and dilute hydrochloric acid at 5°C.

Which is the structure of Intermediate **L**?

(1)

☒ **A** N≡N—Cl

☒ **B** $\overset{+}{N}$≡N Cl⁻

☒ **C** N=N—Cl

☒ **D** $\overset{+}{N}$=N Cl⁻
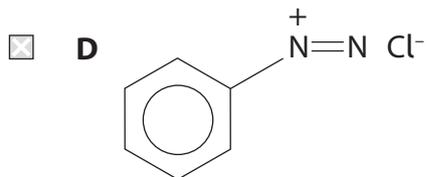

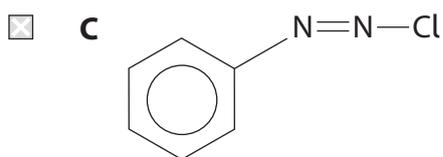

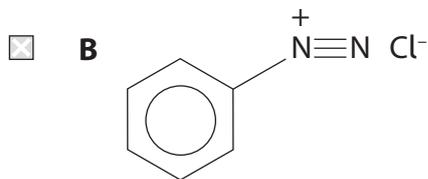

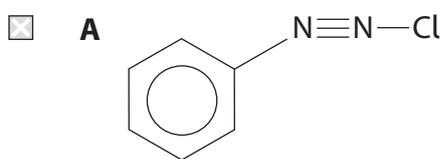

(d) The reactant in Step **4** is phenol.

What condition is needed for this reaction?

(1)

☒ **A** acidic

☒ **B** alkaline

☒ **C** ethanolic

☒ **D** neutral

(Total for Question 15 = 4 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

16 A 10 cm³ mixture of methane and argon is ignited.
The methane requires 4 cm³ of oxygen for complete combustion.

What is the volume of **argon**, in cm³, in the mixture?

All volumes are measured at the same temperature and pressure.

☒ **A** 2

☒ **B** 4

☒ **C** 6

☒ **D** 8

(Total for Question 16 = 1 mark)

17 When 10 cm³ of but-1-ene, C_4H_8, is ignited with excess oxygen, there is an overall decrease in volume of x cm³.

All gas volumes are measured at room temperature and pressure.

$$C_4H_8(g) \ + \ 6O_2(g) \ \rightarrow \ 4CO_2(g) \ + \ 4H_2O(l)$$

A further decrease of y cm³ takes place on the addition of aqueous sodium hydroxide as carbon dioxide is removed.

What are the values of x and y?

		Value of x	Value of y
☒	**A**	30	40
☒	**B**	30	80
☒	**C**	40	40
☒	**D**	40	80

(Total for Question 17 = 1 mark)

TOTAL FOR SECTION A = 20 MARKS

SECTION B

Answer ALL the questions. Write your answers in the spaces provided.

18 This question is about electrochemical cells and redox reactions.

(a) Draw a labelled diagram of the apparatus you would use to measure the standard electrode potential of a $Cu^{2+}(aq)|Cu(s)$ electrode with a standard hydrogen electrode.
Include essential conditions.

(5)

P72995A01132

(b) The standard electrode potentials for two half-cells are shown.

$$Cr_2O_7^{2-}(aq) + 14H^+(aq) + 6e^- \rightleftharpoons 2Cr^{3+}(aq) + 7H_2O(l) \qquad E^{\ominus} = +1.33\,V$$

$$Cl_2(g) + 2e^- \rightleftharpoons 2Cl^-(aq) \qquad E^{\ominus} = +1.36\,V$$
(i) Explain, in terms of electrode potentials, why acidified dichromate(VI) ions react with **concentrated** hydrochloric acid to form chlorine, even though $E^{\ominus}_{cell} = -0.03\,V$.

(3)

....

....

....

....

....

....

....

....

(ii) Write the cell diagram, using the conventional representation of half-cells, for the reaction to produce chlorine.

(2)

(c) When 25.0 cm³ of a 0.100 mol dm⁻³ solution of X_2O_5 reacts with a reducing agent, X is reduced to a lower oxidation state.

To oxidise X back to its original oxidation state required 50.0 cm³ of 0.0200 mol dm⁻³ acidified potassium manganate(VII) solution.

The half-equation for acidified manganate(VII) is

$$MnO_4^- + 8H^+ + 5e^- \rightarrow Mn^{2+} + 4H_2O$$

Calculate the oxidation state of X after it has been reduced.

(3)

(Total for Question 18 = 13 marks)

19 This question is about compounds and complex ions of iron.

(a) A compound of iron contains, by mass, 39.5% potassium, 28.2% iron and 32.3% oxygen.

Calculate the empirical formula of this compound.

(2)

(b) The reaction between iodide ions and persulfate ions is thermodynamically feasible under standard conditions. The reaction is very slow but is catalysed by the presence of Fe^{2+} ions.

$$2I^-(aq) \; + \; S_2O_8^{2-}(aq) \; \rightarrow \; I_2(s) \; + \; 2SO_4^{2-}(aq)$$
(i) Give a reason why the activation energy for this reaction is high in the absence of a catalyst.

(1)

....

....

(ii) Write the ionic equations for the reactions that occur when the catalyst of Fe^{2+} ions is added.
State symbols are not required.

(2)

(c) In aqueous solution, iron(II) exists as the complex ion $[Fe(H_2O)_6]^{2+}$.

(i) Explain how water acts as a monodentate ligand.

(2)

....

....

....

....

....

....

(ii) Explain the shape of the $[Fe(H_2O)_6]^{2+}$ complex ion.

(2)

....

....

....

....

....

....

....

(d) Haemoglobin is an iron(II) complex which carries oxygen around the body.
Part of the structure of oxyhaemoglobin is shown.
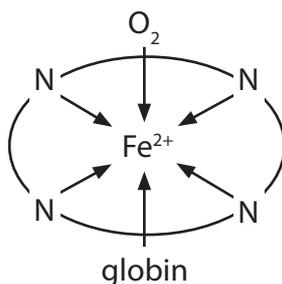

The four nitrogen atoms are part of a multidentate ligand in the haem group.

Explain, in terms of the iron(II) complex, why carbon monoxide is toxic.

(2)

....

....

....

....

....

....

(e) Ethanedioate ligands react with iron(II) ions in aqueous solution.

$$[Fe(H_2O)_6]^{2+} \; + \; 2C_2O_4^{2-} \; \rightarrow \; [Fe(C_2O_4)_2(H_2O)_2]^{2-} \; + \; 4H_2O$$

Explain, in terms of entropy, why this reaction is feasible.

(2)

....

....

....

....

....

....

....

(f) Potassium dichromate(VI) oxidises iron(II) ions to iron(III) ions in acid solution.

$$Cr_2O_7^{2-} + 6Fe^{2+} + 14H^+ \rightarrow 2Cr^{3+} + 6Fe^{3+} + 7H_2O$$
Iron(III) ions do not react with acidified potassium dichromate(VI).

A solution **Y** contains $6.28\,g\,dm^{-3}$ of iron as a mixture of iron(II) ions and iron(III) ions.

$50\,cm^3$ of dilute sulfuric acid is added to a $25.0\,cm^3$ portion of **Y** and it is titrated with a solution containing $2.56\,g\,dm^{-3}$ of dichromate(VI) ions, $Cr_2O_7^{2-}$. The titration is repeated until concordant results are obtained.

The mean titre is $22.55\,cm^3$.

Calculate the percentage of iron present as **iron(III)** ions in **Y**.

BLANK PAGE

P72995A01832

20 This question is about benzene and some of its compounds.

(a) Benzene reacts with bromine in the presence of an iron(III) bromide catalyst to form bromobenzene.
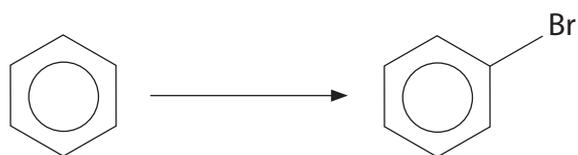

(i) Draw the mechanism for this reaction, including the formation of the electrophile.

(4)

P 7 2 9 9 5 A 0 1 9 3 2

*(ii) Compare and contrast the reaction of benzene with bromine with the reactions of cyclohexene with bromine and of phenol with bromine.

Include reasons for any differences.

Detailed mechanisms for these reactions are **not** required.

(6)

P 7 2 9 9 5 A 0 2 0 3 2

(b) Devise a synthesis to convert bromobenzene into benzamide.

Include reagents, conditions and the structures of the intermediate compounds.
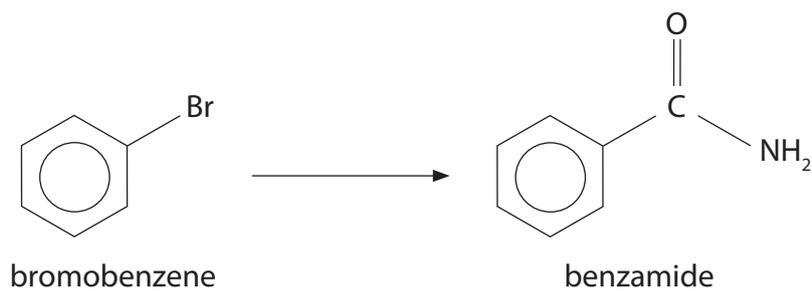

bromobenzene → benzamide

(7)

(c) Semi-aromatic polyamides have high melting temperatures, high strength and rigidity and are resistant to chemical attack so they have many applications in engineering.

(i) Draw the repeat unit of the polyamide formed from the monomers shown.

$H_2N(CH_2)_6NH_2$ and
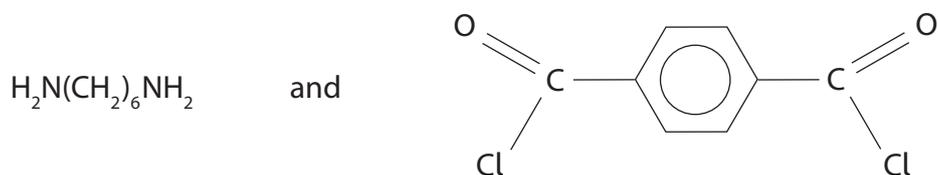

(1)

(ii) Explain why polyamides have higher melting temperatures than polyalkenes.

(2)

TOTAL FOR SECTION B = 51 MARKS

SECTION C

Answer ALL the questions. Write your answers in the spaces provided.

21

Salicylic acid

Salicin was extracted from the bark of willow trees in the first half of the 19th century. About 30 years later, scientists showed that salicin was converted into salicylic acid in the body.
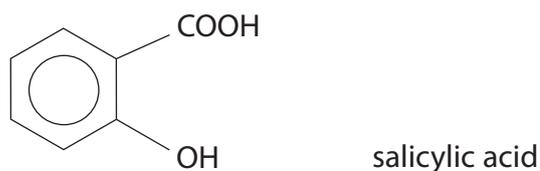

salicylic acid

Salicylic acid was given to patients with fevers and their symptoms were reduced. However, it caused severe irritation to the lining of the mouth, oesophagus and stomach.

In the 1890s Hoffmann converted salicylic acid into acetylsalicylic acid, which is commonly known as aspirin and is still used to treat fevers and as a painkiller.

acetylsalicylic acid
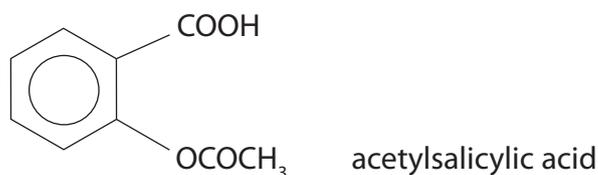

Salicylic acid may also be converted into methyl salicylate. This is the active ingredient in oil of wintergreen, which is applied externally to treat joint and muscle pain.

methyl salicylate
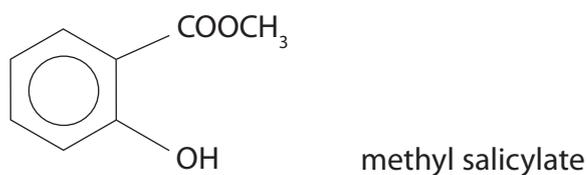

(a) Give the IUPAC name for salicylic acid.

(1)

....

(b) Acetylsalicylic acid is formed when salicylic acid reacts with ethanoic anhydride, $(CH_3CO)_2O$.

   (i) **Name** the three functional groups in acetylsalicylic acid.

(1)

....

   (ii) Write the equation for the reaction of salicylic acid and ethanoic anhydride.

(1)

   (iii) 2.00 g of salicylic acid produced a 74.8% yield of acetylsalicylic acid.

   Calculate the mass of acetylsalicylic acid formed.

   [M_r values: salicylic acid = 138   acetylsalicylic acid = 180]

(3)

(c) Acetylsalicylic acid is only slightly soluble in water.
It has a K_a value of 2.8×10^{-4} mol dm^{-3}.

(i) Complete the equation to show the dissociation of acetylsalicylic acid in aqueous solution.

(1)

COOH

OCOCH$_3$

$\rightleftharpoons$
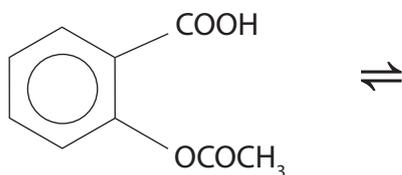

(ii) The dissociation of acetylsalicylic acid is different in the acidic conditions found in the stomach compared with the slightly alkaline conditions in the small intestine.

Explain this difference in dissociation.

(3)

....

....

....

....

....

....

....

....

....

(d) Identify, by name or formula, the reagent needed to convert salicylic acid into methyl salicylate.

(1)

....

(e) The high resolution proton (^{1}H) NMR spectra of acetylsalicylic acid and methyl salicylate both contain four peaks from the protons on the benzene ring and two other peaks from the OH and CH_3 protons in the side chains.

Complete the table to give the chemical shift ranges that you would expect for each type of proton in the side chains of the molecules.

COOH

OCOCH$_3$

acetylsalicylic acid

COOCH$_3$

methyl salicylate

(2)

	Acetylsalicylic acid		Methyl salicylate	
Type of proton	OH	CH$_3$	OH	CH$_3$
Chemical shift / ppm				

P 7 2 9 9 5 A 0 2 7 3 2

(f) Acetylsalicylic acid in aspirin tablets is hydrolysed by excess sodium hydroxide.

$$CH_3COOC_6H_4COOH \ + \ 2NaOH \ \rightarrow \ CH_3COONa \ + \ HOC_6H_4COONa \ + \ H_2O$$

The unreacted sodium hydroxide may be titrated with a standard solution of hydrochloric acid to determine the percentage of acetylsalicylic acid in the tablets.

Aspirin tablets can be analysed using the outline procedure:

- add 25.0 cm³ of 1.00 mol dm⁻³ sodium hydroxide to a known mass of powdered aspirin tablets

- heat the mixture for 10 minutes to hydrolyse the aspirin

- cool the mixture, make the solution up to 250.0 cm³ in a volumetric flask and mix it thoroughly

- pipette 25.0 cm³ of the hydrolysed solution into a conical flask and titrate it against 0.100 mol dm⁻³ hydrochloric acid using phenolphthalein indicator

- repeat the titration until concordant values are obtained.

Results

Mass of aspirin tablets used = 0.760 g

Mean titre = 16.95 cm³

The table shows the percentage by mass of acetylsalicylic acid in four brands of aspirin tablets.

Brand of aspirin tablets	Percentage of acetylsalicylic acid / %
A	92.2
B	95.4
C	97.5
D	99.6

Determine which brand of aspirin tablets was analysed.

You **must** show your working.
