**Analysis**

Up to 2 marks for likely impact

- Luca experiences increasing marginal utility when increasing consumption from 1 to 2 drinks/ 2 to 3 drinks/ 3 to 4 drinks/ as the number of drinks moves from 1 to 4 the marginal utility increases from 17 to 21 **(1)**
- Diminishing marginal utility starts when he moves from 4 to 5 drinks **(1)** marginal utility falls from 21 to 12/ as consumption increases from 5 to 6 marginal utility falls from 12 to 5/ as the number of drinks moves from 4 to 6 the marginal utility decreases from 21 to 5 **(1)**

**(4)**

| <b>Question</b>  | <p>Evaluate the impact of the 400% increase in the cost of fertiliser on farmers and households.</p> <p>Include one diagram to show the impact on farmers in your answer.</p> <p><b>Indicative content</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Other relevant points must also be credited.</p> <p><b>Knowledge, application and analysis (12 marks) – indicative content</b></p> <p>400% increase in costs</p> <p>Farmers</p> <ul style="list-style-type: none"> <li>• Increased costs of production</li> <li>• Supply shifts left, <math>S</math> to <math>S_1</math></li> <li>• Demand contracts</li> <li>• Price increases, <math>P_e</math> to <math>P_1</math></li> <li>• Quantity decreases, <math>Q_e</math> to <math>Q_1</math></li> <li>• Decreased consumer surplus, <math>ACP_e</math> to <math>ABP_1</math></li> <li>• Decreased producer surplus</li> <li>• Some may exit the market as profits fall</li> <li>• If less fertiliser is used, productivity may fall leading to a fall in income for farmers</li> </ul> |

#### Households

- 38% increase in global food price index
- Pay more in farm shops/for food in supermarkets
- Consumer surplus falls
- Food less affordable
- Demand for food very price inelastic meaning that consumers spend a higher proportion of their income on food
- Less income left to spend on other (non-food) goods and services
- Decrease demand for other goods e.g. electronics and entertainment

**NB Maximum Level 3 if farmers or households omitted**

**NB Maximum Level 3 if no relevant diagram drawn**

| Level          | Mark  | Descriptor                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | 0     | No rewardable material.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Level 1</b> | 1–3   | <p>Displays isolated, superficial or imprecise knowledge and understanding of economic terms, principles, concepts, theories and models.</p> <p>Use of generic material or irrelevant information or inappropriate examples.</p> <p>Descriptive approach, which has no chains of reasoning.</p>                                                                                                                                                                           |
| <b>Level 2</b> | 4–6   | <p>Displays elements of knowledge and understanding of economic terms, principles, concepts, theories and models.</p> <p>Limited application of knowledge and understanding to economic problems in context.</p> <p>A narrow response or superficial, only two-stage chains of reasoning in terms of cause and/or consequence.</p>                                                                                                                                        |
| <b>Level 3</b> | 7–9   | <p>Demonstrates accurate knowledge and understanding of economic terms, principles, concepts, theories and models.</p> <p>Ability to apply knowledge and understanding to some elements of the question. Some evidence and contextual references are evident in the answer.</p> <p>Analysis is clear and coherent. Chains of reasoning in terms of cause and/or consequence are evident but they may not be developed fully or some stages are omitted.</p>               |
| <b>Level 4</b> | 10–12 | <p>Demonstrates accurate and precise knowledge and understanding of economic terms, principles, concepts, theories and models.</p> <p>Ability to link knowledge and understanding in context using appropriate examples which are fully integrated to address the broad elements of the question.</p> <p>Analysis is clear, coherent, relevant and focused. The answer demonstrates logical and multi-stage chains of reasoning in terms of cause and/or consequence.</p> |

**Evaluation (8 marks) – indicative content**

- Magnitude of the increase in fertiliser costs is significant so the impact on costs is large
- The magnitude of the increase in the global food price index is much smaller than the increase in the cost of fertiliser/represents significant costs to households
- Depends on the proportion of total production costs that are accounted for by fertiliser
- The impact will depend on how long the prices remain high
- Organic farmers who do not use fertiliser will benefit as their competitors producing non-organic good will suffer
- Depends on how other costs change
- Use of fertiliser may fall- reducing external costs of production- impact on wildlife
- Farmers may absorb some of the increases in costs and not pass on price increases
- Price elasticity of demand- if inelastic there will be only small changes in quantity
- Impact greatest on low-income households as food costs will make up greater proportion of income
- Government policy can alleviate the issue- accept specific examples

| Level          | Mark | Descriptor                                                                                                                                                                                                                 |
|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | 0    | No rewardable material.                                                                                                                                                                                                    |
| <b>Level 1</b> | 1–3  | Identification of generic evaluative comments.<br>No supporting evidence/reference to context.<br>No evidence of a logical chain of reasoning.                                                                             |
| <b>Level 2</b> | 4–6  | Evidence of evaluation of alternative approaches.<br>Some supporting evidence/reference to context.<br>Evaluation is supported by a partially-developed chain of reasoning.                                                |
| <b>Level 3</b> | 7–8  | Evaluation recognises different viewpoints and/or is critical of the evidence, leading to an informed judgement.<br>Appropriate reference to evidence/context.<br>Evaluation is supported by a logical chain of reasoning. |
